

Help! What should My Major be?

1. If you could go to a high school that taught *only one* class all day and all week long, what class would you want it to be? (*Don't write "Lunch"!*) Why did you choose that class?

2. What activities might make you late to dinner? (*Passive activities such as TV-watching, purely recreational activities such as video games or purely social activities such as talking on the phone don't count.*)

3. Which would you most enjoy working with: data, people or things?
Give an example of something successful that you've done with this kind of work.

4. Which would be your second choice to work with: data, people or things?
Give an example of something successful that you've done with this kind of work.

5. Pretend you could go to one room on a college campus and choose one person who would have to go to lunch with you. In which room would you find the most interesting person for lunchtime conversation? (*Check one.*)

|--|--|
| <input type="checkbox"/> a lecture hall in the psychology building | <input type="checkbox"/> the gym |
| <input type="checkbox"/> a chemistry or biology lab | <input type="checkbox"/> a studio or stage in the arts building |
| <input type="checkbox"/> the library | <input type="checkbox"/> a chaplain's office |
| <input type="checkbox"/> the computer center | <input type="checkbox"/> a classroom where they're discussing business |

6. Think about how the following 12 characteristics would make your future job more or less satisfying. Then give each one a number from 1 to 12, using 1 for what you want most, 2 for what you want second-most, and so forth, all the way to 12 for what you want least. You must use all the numbers from 1 to 12, and no ties are allowed.
